COSMETIC PROCEDURES

CONSIDER THE IMPORTANCE OF having your cosmetic eyelid and brow surgery performed by a plastic surgeon who specializes exclusively in the eyelid area, and who is also a board-certified ophthalmologist.

UPPER AND LOWER EYELID BLEPHAROPLASTY

The removal of wrinkled skin and bulging fat from the eyelids restores a more youthful appearance and reduces the feeling of heaviness caused by these excess tissues.

ENDOSCOPIC BROW AND FOREHEAD LIFT

Droopy eyebrows may cause a tired appearance, as well as contribute to excess skin in the upper eyelids. Through several small incisions behind the hairline, endoscopic equipment can be used to lift the forehead and brows to restore a smoother, less wrinkled forehead and higher eyebrow position.

AREAS OF INTEREST

EYELID MALPOSITION

- Repair of droopy upper lids, in-turning or out-turning lower lids, eyelid scarring

EYELID SKIN LESIONS

- Removal of growths
- Reconstruction after skin cancer removal

LACRIMAL (TEARDUCT) DISORDER

- Evaluation of tearing, balloon dacryoplasty, endoscopic tear duct surgery.

PEDIATRIC EYELID AND LACRIMAL DISORDERS

- Evaluation and treatment of children with droopy lids or tearing problems.

EYE SOCKET AND EYELID TRAUMA

- Evaluation and repair of fractures.
- Repair of eyelid injuries.

ORBITAL TUMORS

- Diagnosis and management of tumors of the eye socket.

THYROID EYE DISEASE

- Evaluation and treatment, including orbital decompression, muscle surgery and eyelid reconstruction.
